

ARCHIVESSPACE PLUGINS AT NYU

Rachel Searcy

ArchivesSpace Member Forum, 2019 August 2

<https://guides.nyu.edu/archivesspace>

■ MARC Export Plugin

- Modifies ArchivesSpace MARC export to enforce [local content standard](#), address gaps in functionality, and extend mapping.
- Creates 863/949 fields for item records (container information, including barcodes).
- Facilitates loading into ILS (Aleph), OCLC Connexion, and offsite workflows.

■ MARC Export Plugin

Enforce local content standard

- Suppress specified notes (e.g., Biographical/Historical, Scope and Contents)

Address gaps in functionality

- Change subfield indicators for Uniform Titles
- Add subfield for local agent headings

Create 863/949 item pairs

- Create item records for top containers with box number, barcode, and local codes for offsite workflows

MARC Export Plugin

863/949 pair per top container:

863 field: basic bibliographic unit

949 field: item record

■ MARC Export Plugin

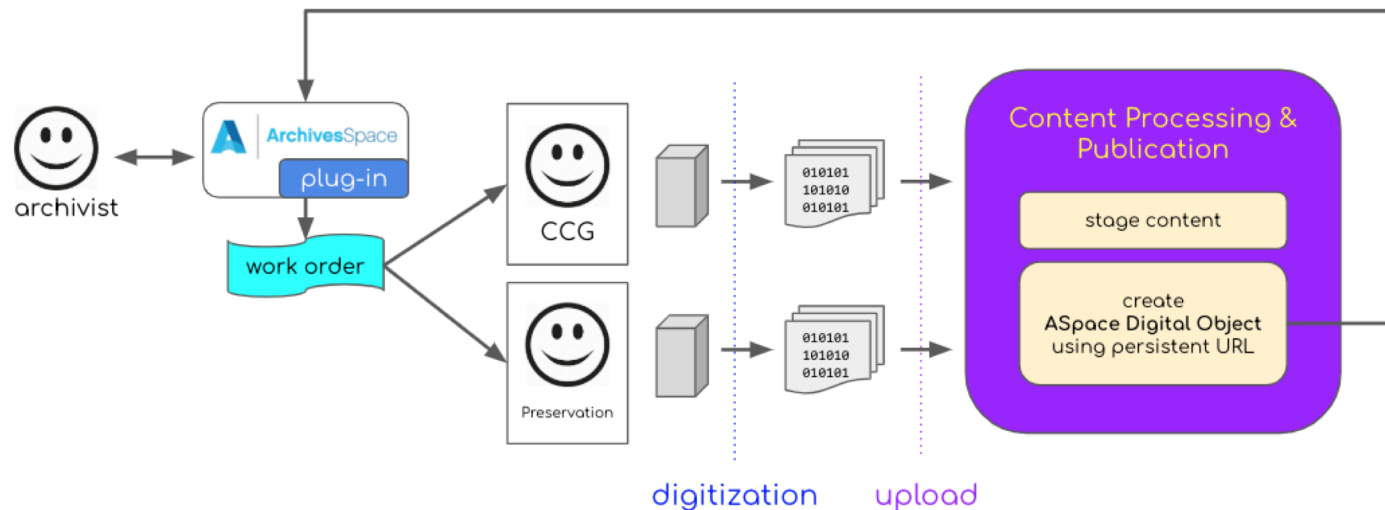

- Limits manually editing and clean-up.
- Facilitates record load into Aleph and OCLC.
- Facilitates large-scale workflow to send materials to offsite facility.

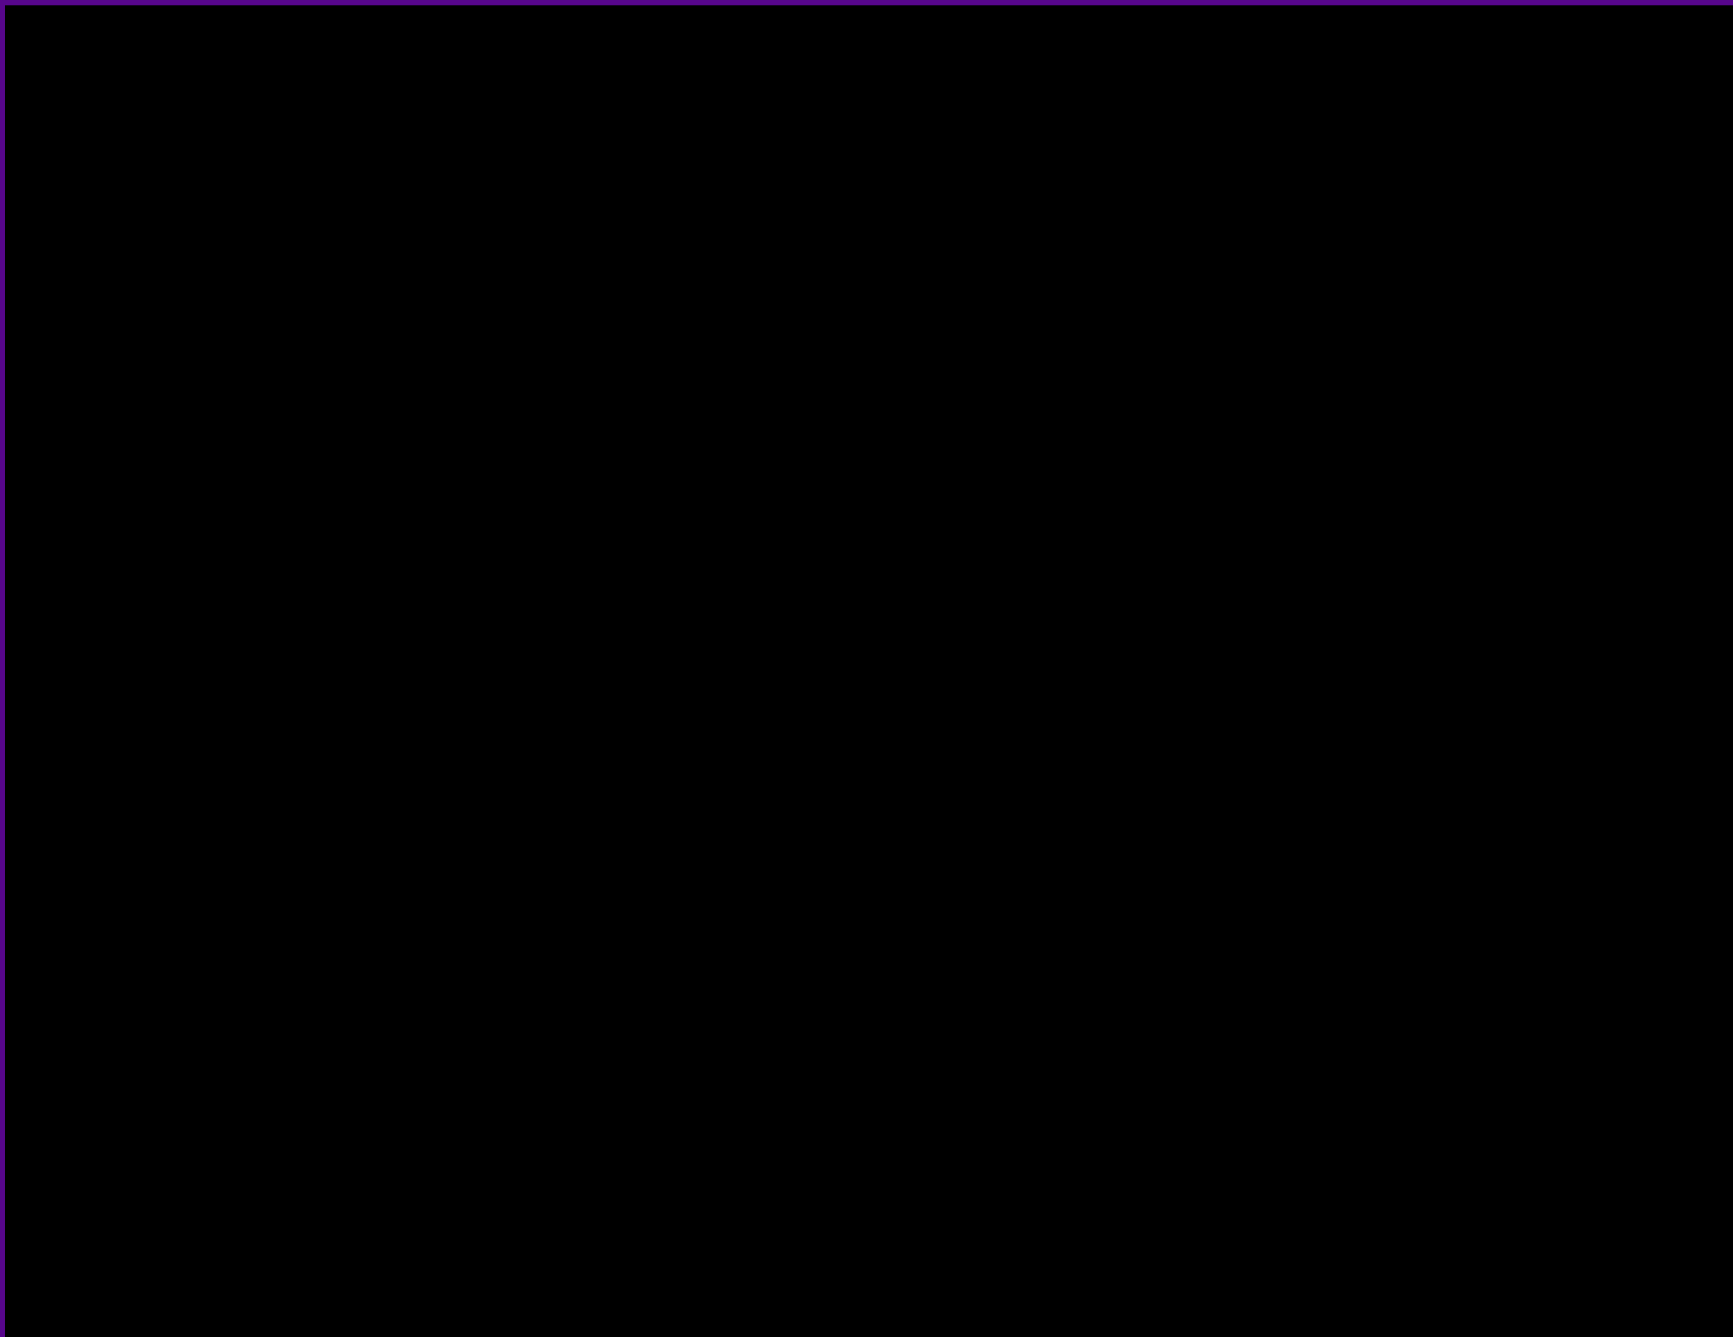

■ Work Order Plugin

- Creates tsv of descriptive metadata for selected components in a resource record.
- Optionally creates simple Component Unique Identifier (cuid).
- Used in inter-departmental workflows for reformatting and digitization, but adaptable for other uses.

Work Order Plugin

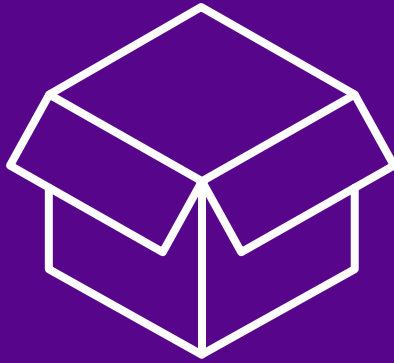

ArchivesSpace Work Order Plug-in Workflow Part 1

■ Work Order Plugin

- Facilitates workflows and file naming for in-house reformatting and digitization.
- Often used with [local script](#) to create and post new digital object records to ArchivesSpace API.
- Plugin includes option to create tsv without assigning cuids.
- Other uses: packing manifest, spreadsheet for donor, exhibition inventory, item-level control for special storage.
