# Reprints Desk

## Unmediated Server Addon

- Has been available since January 2019
- Routing rules move items to a queue for the addon to grab and attempt to send to Reprints Desk
- Requires a username and password for the Reprints Desk API

## Decision Support Pipeline Addon

- Available as of ILLiad 9.1 (December 2019)
- Allows requests to be queried against multiple fulfillment options and sent to best option
- Requires a username and password for the Reprints Desk API

## Why Reprints Desk?

- Depending on the copyright costs, turnaround time, and delivery methods available, Reprints Desk may be the most cost-effective solution
- Reprints Desk can deliver the article using Odyssey with very fast turnaround time
- Copyright costs are included in the Reprints Desk fee

# But what about Copyright??

- When you set up Reprints Desk, you create a lender symbol for them and mark that lender as a copyright payer.
- Any items filled by a copyright payer are filtered from the copyright report to send to the CCC, even if copyright fees were recorded.

# Which option is right for me?

- If you have already set up the Reprints Desk unmediated server addon, you can continue to use it.
- If you are interested in other Decision Support Pipeline addons, you may want to switch to the DSP version to integrate Reprints Desk fulfillment with those other options.
